# Google: Java Alternatives “all suck”

From: Tim Lindholm  
To: [ - ] Andy Rubin; benlee@google.com  
Cc: [ - ] Dan Grove; Tim Lindholm  
Bcc: [ - ]  
Subject: Context for discussion: what we're really trying to do

Attorney Work Product  
Google Confidential

Hi Andy,

This is a short pre-read for the call at 12:30. In Dan's earlier email we didn't give you visceral reaction that we got.

What we've actually been asked to do (by Larry and Sergei) is to investigate what technical alternatives exist to Java for Android and Chrome. We've been over a bunch of these, and think they all suck. We conclude that we need to negotiate a license for Java under the terms we need.

That said, Alan Eustace said that the threat of moving off Java hit Safran Katz hard. In negotiation to put forward our most credible alternative, the goal being to get better

It looks to us that Obj-C provides the most credible alternative in this context, which should not be confused with us thinking we should make the change. What we're looking for from you is the reasons why you hate this idea, whether you think it's a nonstarter for negotiation purposes, and whether you think there's anything we've missed in our understanding of the option.

**From:** Tim Lindholm

**To:** Andy Rubin

**Sent:** 8/6/2010

“What we’ve actually been asked to do (by Larry and Sergei) is to investigate what technical alternatives exist to Java for Android and Chrome. We’ve been over a bunch of these, and think they all suck. We conclude that we need to negotiate a license for Java under the terms we need.”

# Android Was “Devastating”

**NEAL CIVJAN**

Former VP Worldwide  
OEM Software Sales

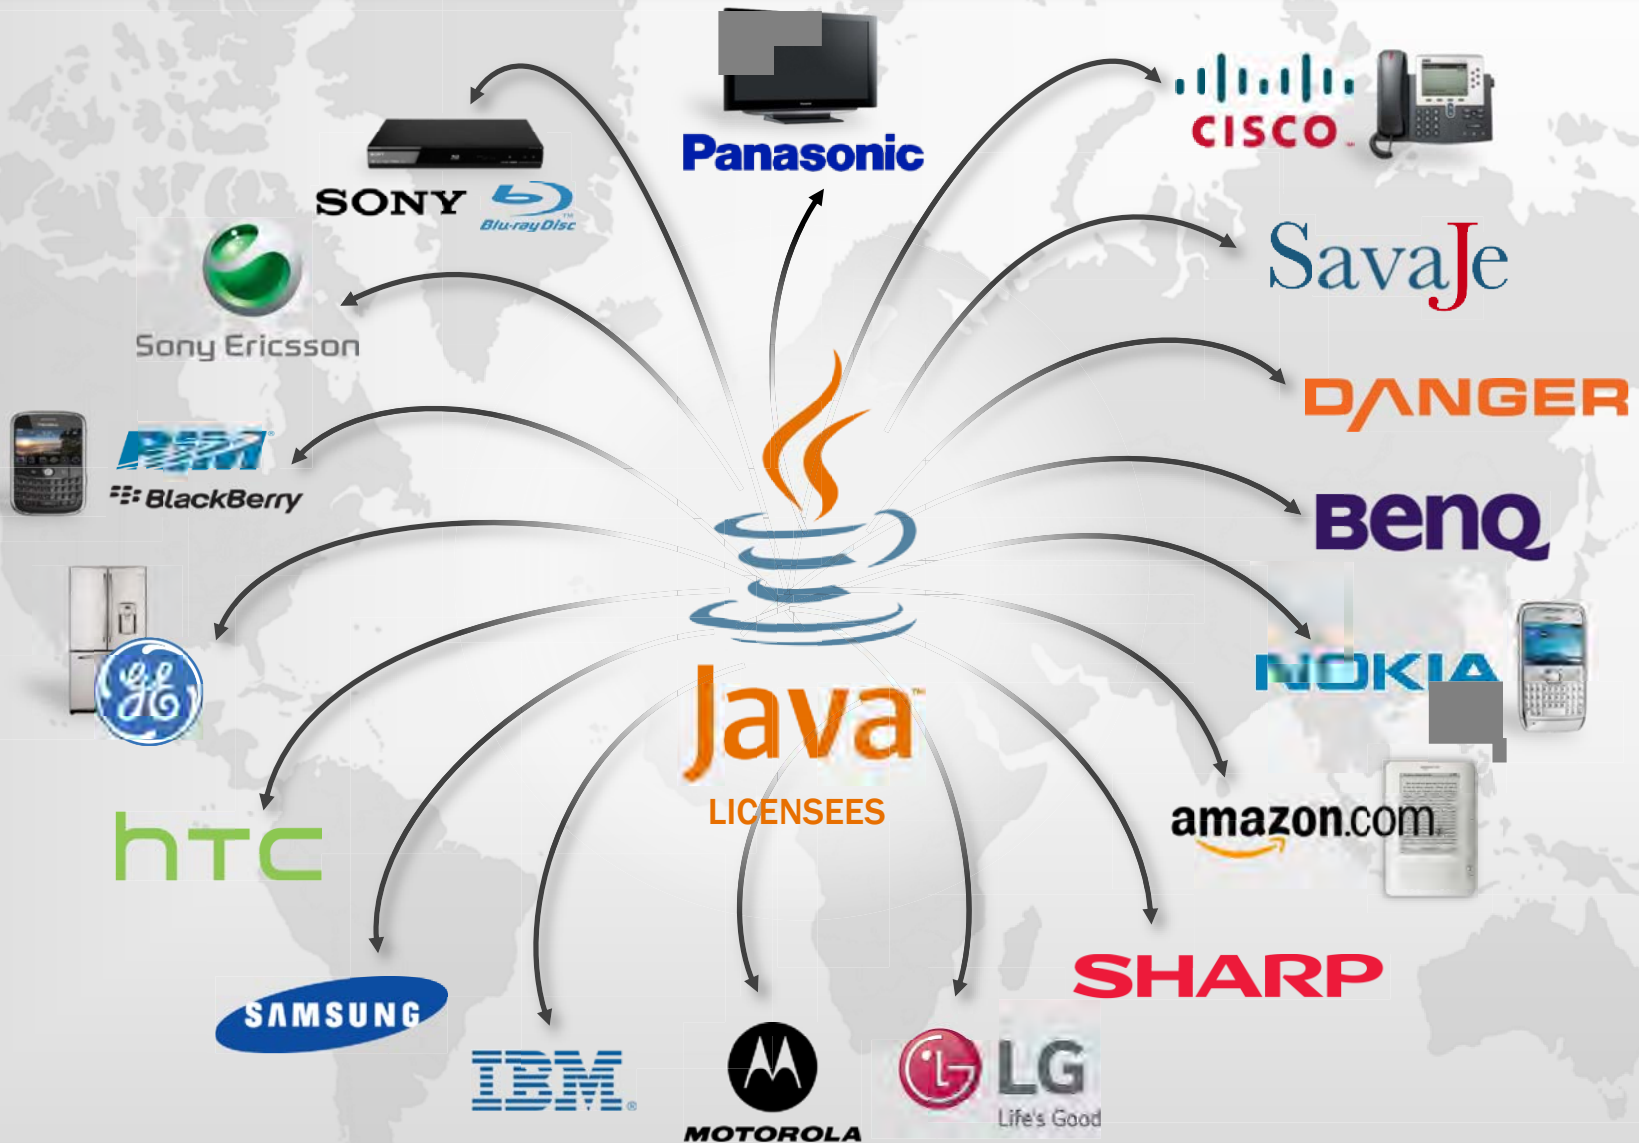

**Q.** All right. Can you tell us, sir, in one word the impact of Android on Java?

**A.** It was devastating.

# The World's Leading Companies License Java for Their Products

# Google Was the Only One That Didn't Play by the Rules

**LARRY PAGE**

Chief Executive Officer

**Q.** Can you name a single company that uses Java APIs that has not taken a license from Sun or Oracle except for Google?

**A.** As I said, I'm not an expert on that and I already said that I didn't.

**Q.** Was that testimony that you gave, and do you stand by it?

**A.** Sure. Yes.

# Google's CEO: "I didn't know the detail"

**LARRY PAGE**

Chief Executive Officer

**Q.** You know that we are here in this courtroom today because Google copied more than 11,000 lines of computer code and the structure, sequence and organization of 37 Java API packages. Do you know that, sir?

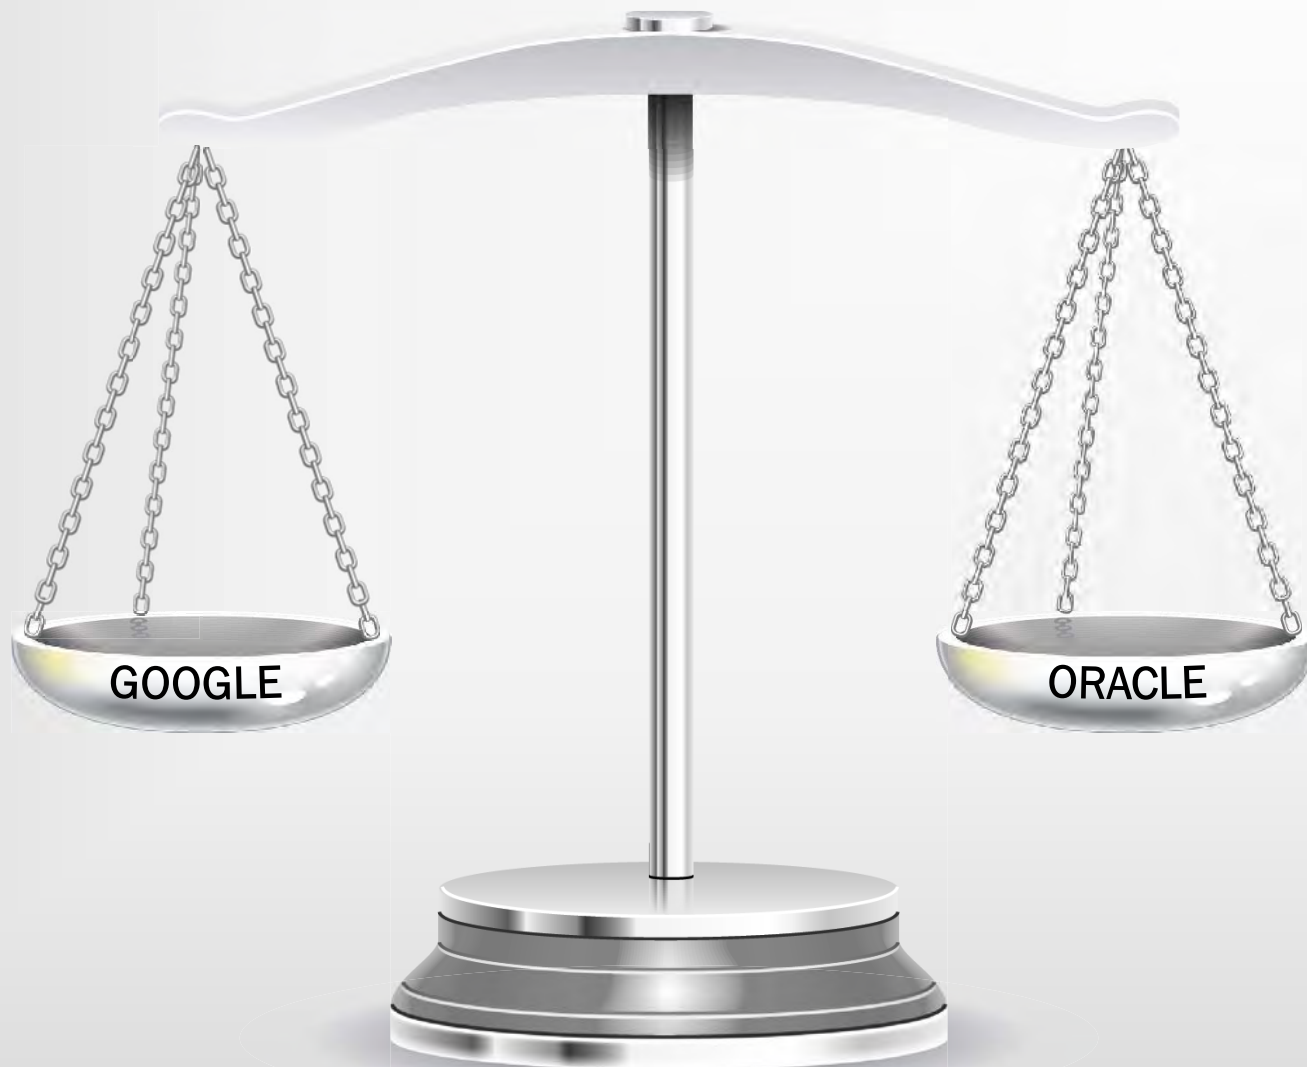

**A.** No. I don't know the detail of what's alleged.

# What This Case Is About

“Google’s use of the declaring lines of code and the structure, sequence, and organization of those 37 API packages **constituted copyright infringement** unless you find that Google has carried its burden as to the defense of fair use.”

**GOOGLE HAS THE  
BURDEN OF PROOF**

# Weighing the Fair Use Factors

**FAIR USE  
EXCUSE**

# Fair Use Factors

1

## **COMMERCIALITY ▪ TRANSFORMATIVE ▪ GOOD FAITH**

The purpose and character of the use, including whether such use is of a commercial nature or is for nonprofit educational purposes;

2

## **CREATIVITY**

The nature of the copyrighted work;

3

## **SUBSTANTIALITY**

The amount and substantiality of the portion used in relation to the copyrighted work as a whole; and

4

## **MARKET HARM**

The effect of the use upon the potential market for or value of the copyrighted work.

# Real Examples of Fair Use

## § 107. Limitations on exclusive rights: Fair use

“... the fair use of a copyrighted work, including such use by reproduction in copies or phonorecords or by any other means specified by that section, for purposes such as criticism, comment, news reporting, teaching (including multiple copies for classroom use), scholarship, or research, is not an infringement of copyright.

# Factor 1: Google Used the Java APIs for Commercial Reasons

1

**COMMERCIALITY** ▪ TRANSFORMATIVE ▪ GOOD FAITH

The purpose and character of the use, including whether such use is of a commercial nature or is for nonprofit educational purposes;

“In evaluating the first statutory factor, the extent of the commercial nature of the accused use must be considered. In this case, all agree that Google’s accused use was commercial in nature but disagree over the extent.”

# Extent of Commerciality: 42 Billion Dollars

1

COMMERCIALITY

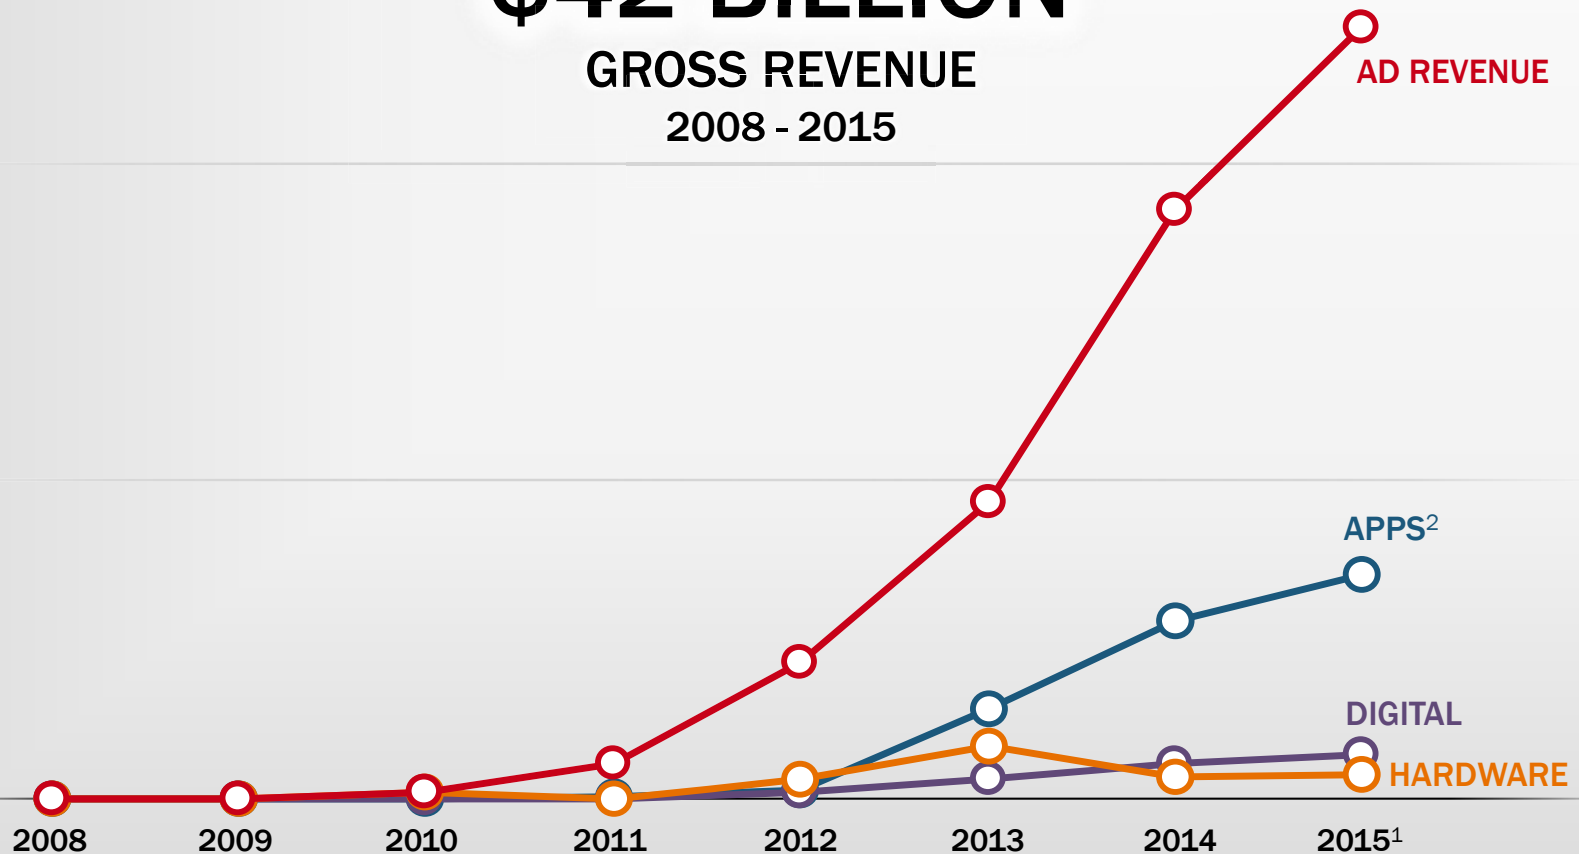

TRANSFORMATIVE

GOOD FAITH

## \$42 BILLION

GROSS REVENUE

2008 - 2015

<sup>1</sup>Ad revenues annualized based on six-month period ending June 30<sup>th</sup> <sup>2</sup>Q4 2015 revenue is a Google forecast

# Android: Direct Revenue Impact

1

**COMMERCIALITY**

▪ **TRANSFORMATIVE**

▪ **GOOD FAITH**

## Android spreads value

### Direct Revenue

- **Mobile Ads Revenue Enabled on Android -- \$159M FY10**
  - Search \$89M, AFMA \$56M, AFMC/AFMS \$14M

### Direct Revenue Impact

- **Mobile Ads Revenue Enabled on Android -- \$159M FY10**
  - Search \$89M, AFMA \$56M, AFMC/AFMS \$14M
- **Android Market Revenue – \$3.8M FY10 (\$76M of apps sales)**

### Benefits to Google

- **Technology Platform Leveraged by Other Google Products**
  - E.g., GoogleTV
- **Deeper, Stronger Relationships with Partners**
  - OEM: HTC, Motorola, Samsung, LG, etc.
  - Carrier: Verizon, T-Mobile, Vodafone, etc.
  - Semiconductor: Qualcomm, Intel, Nvidia, etc.
  - Software: Adobe
  - Media: Record labels, movie studios, news organizations, etc.

### Benefits to the Ecosystem

- **Improved Mobile Ecosystem**
  - Changes in user expectations -- demanding better hardware, faster connections, better internet experience on phones
  - Lower-cost data plans
  - Reduced subscriber acquisition costs (Google brand drives users to carriers)
- **Improved Advertising Ecosystem**
  - Ad formats and targeting capability unique to smartphones (e.g., location)
  - Deeper user engagement and intent signals
- **Improved Publisher Ecosystem**
  - Emergence of entirely new publishing segment – Apps
  - Incremental traffic and more engaged users

# Larry Page: Extent of Commerciality Is “Mind-boggling”

1

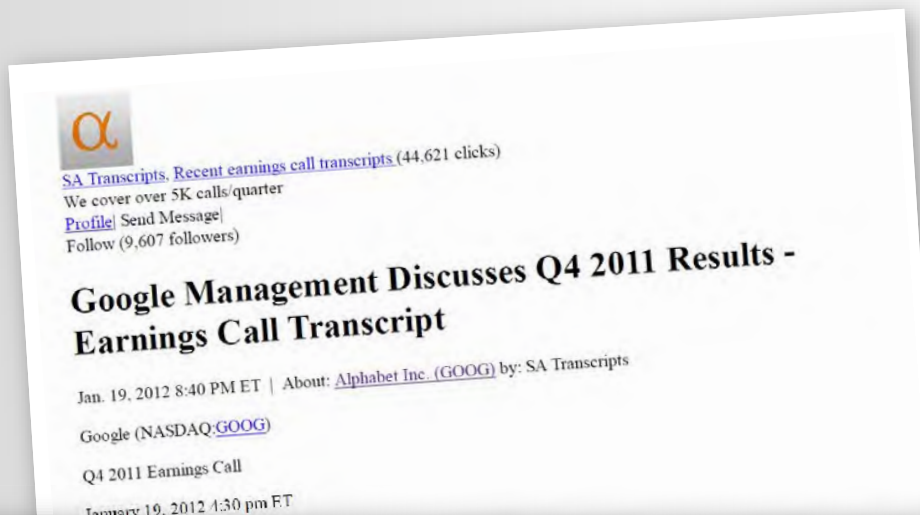

COMMERCIALITY

TRANSFORMATIVE

GOOD FAITH

LARRY PAGE

Chief Executive Officer

January 19, 2012:

“Android is, quite simply, **mind-boggling**. 700,000 phones are lit up every day. And I'm pleased to announce 250 million Android devices in total, up 50 million since our last announcement just in November. In just **2 days over the holiday weekend**, 3.7 million Androids were activated. And today, we're announcing over 11 billion downloads from Android markets. **Wow.**”

# The 37 API Packages are in Every Android Phone

1

COMMERCIALITY ▪ TRANSFORMATIVE ▪ GOOD FAITH

**ERIC SCHMIDT**  
Executive Chairman

Q. And if we roll forward -- so this is 2011. He's saying 550,000 per day. You said, in about 2013, that you were at 1.5 million activations per day. Does that sound about right?

A. That's correct.

Q. And each and every one of those activations has the design of those 37 packages in it; right? Every one of those phones.

A. Yes.

# Android Is Hugely Profitable

1

**COMMERCIALITY**

TRANSFORMATIVE

GOOD FAITH

**ERIC SCHMIDT**  
Executive Chairman

“So, again, it's more lucrative. So, not only is there more searches, and there's more ads, but it's also more lucrative. So, on that basis alone, Android is **hugely profitable.**”

# Android: A \$43 Billion/Year Ecosystem

1

COMMERCIALITY

TRANSFORMATIVE

GOOD FAITH

Our application and advertising services helped build Android into a \$43B / year ecosystem; these same services protect us from losing control<sup>1</sup>

Android now supports a hardware and services ecosystem worth over \$43B a year<sup>(1)</sup>

Our apps and ads services have made this possible, and work to protect our position

- Solved the Unix/Linux fragmentation problem by providing scale and consistency within an open platform
- Single brand

Our application and advertising services helped build Android into a \$43B / year ecosystem; these same services protect us from losing control<sup>1</sup>

All enabled by...

These services inherently rely on scale to succeed – no one partner can easily fragment and replicate the complete platform

And we'll soon HARVEST and dramatically increase the value of these streams further:

- **Android Market** – Expanding internationally, adding in-app billing, direct carrier billing, improving app discoverability, and more
- **Digital Content** – Q1 launch of Google's own content store
- **Mobile Wallet** – Trials beginning in Q4
- **And more...**

# Google Witnesses Admitted: Android Uses the Java APIs for the Same Purpose

1

COMMERCIALITY

▪ **TRANSFORMATIVE**

▪ GOOD FAITH

**ANWAR GHULOUM**

Google Engineering Manager

Q. Do you agree with me that the - that Java classes and methods that are reproduced in Android serve the same purpose in Android that they serve in Java?

A. Yeah, I believe they serve the same purpose.

Depo. at 183:5-11

**RETO MEIER**

Android Developer Advocate

Q. Because the Java APIs are used in the same way when writing an application for Java as they would be used when writing an application for Android; correct?

A. The Java APIs that are available in both platforms, you would expect them to work in the same way, yes.

Depo. at 105:24-106:5

# Everyone Agrees: Android's Use of The Java APIs Was For The Same Purpose

1

COMMERCIALITY

**TRANSFORMATIVE**

GOOD FAITH

**DOUG SCHMIDT**

Oracle Expert

The APIs are used in Android – the 37 copied APIs are used in Android for precisely the same purpose that they're used in Java... So they're not altered.

# Google Copied the 37 Java API Packages and Used Them for the Same Purpose

1

COMMERCIALITY

TRANSFORMATIVE

GOOD FAITH

DOUG SCHMIDT

Oracle Expert

Q. If we think about that from a developers' perspective in the `security` package, what's the significance of it having the same purpose?

A. So it would mean that if somebody knew how to use security in Java SE, they would also know how to use this in the same way in Android.

Subject: Re: Android announce at 3GSM.

Andy,

I think we probably should here are some random thoughts on why I think that along with a dum

Why announce:

- if we wait then other soln's will have a much better chance of getting traction. I don't think that much further along in terms of a complete platform (I am thinking QT, Access, etc). As a case in doing what we are doing, SavaJe would prob have gotten more funding.
- Assist with partnerships. The hardware guys (like Moto) will want to get their ducks in a row before they realize that we only have so much bandwidth and if they don't jump on board then other place. The software guys will all want to be a part of it.
- Help with carrier deals. All will realize that the chance of doing something exclusive with us in be near impossible once we launch. Having a launch date will be a strong sales tool to have con

What do we announce: pick one or more of the following:

1. Google Phone (Sooner?)
  2. OS
  3. Alliance
  4. Carrier Partners (signed on to-date)
  5. OEMs (would moto show FNDP that far before launch, I doubt it)
- (I think we should at least announce 1, 2 & prob 3).

Issues:

- We will have to show a phone. That means that we will have significant preassure to shop sooner. We better make sure we want to ship it.

**From:** Rich Miner  
**To:** Andy Rubin

The APIs still allow compatible implementations, e.g. Apache Geronimo's implementation of the J2EE specification.

Which "shared part" are you referring to? Let's assume they'll be able to get the TCK. Then they build the J2ME. And it passes the TCK. What would they need to take from Sun?

And what can we do to get you, et al, talking with them? It would be great if we could trade info.

Thx,  
-g

Maybe the distinction here is: what do we support inside and what do we support outside? Obviously, we don't want to port the simulator to lots of targets. It's too much work already. Maybe we maintain the simulator on all current targets for internal use only and tell external people to use the emulator. I agree, we should have a response.

Google Android on the defensive

Go

By

Android will be different from the leading smartphone operating system, Symbian, because it is open source, said Dave Burke, an engineering manager within Google's mobile team. He also defended the search giant's decision to use its own flavor of Java and not to support the popular C++ programming language.

“The comments were made to an audience of mobile developers at the Future of Mobile event in London.

“Software is an increasing percentage of the cost of handsets, and Google feels that there is not enough innovation,” Burke said, adding that an open source environment would provide a good phone experience and reduce the cost of a phone by 10%. Android would provide a unified platform that allowed delivery on multiple devices, he said.

By comparison, operators pay a license fee for Symbian, and it is fragmented between the S60 and UIQ platforms.

“The big difference between other Linux phone platforms such as Mifve and OpenMoco, said Burke, is that “this is real. It has a big momentum with key partners.”

Burke faced probing questions on the details of the environment.

Game developers in the audience asked why there was no C++ support, saying this would allow faster response times and better control, but Burke disagreed. “We have our own APIs (and) a better flavor of Java.”

Asked about Android's security model, Burke said “We are trying to do a more simple permission system,” explaining that Android takes the Java Mobile Information Device Profile (MIDP)'s security model, and uses it to produce something “sensible” so the environment is secure but “the user won't be bugged by questions.”

This is really important and a legal issue.

UNITED STATES DISTRICT COURT  
NORTHERN DISTRICT OF CALIFORNIA  
**TRIAL EXHIBIT 29**  
CASE NO. 10-0351 WEA  
DATE ENTERED:  
BY: DEPUTY CLERK

1) Are we able to answer direct developer questions about Android at the booth?  
Yes. One-on-one only, please

2) Can we demonstrate the tooling, emulator, developer environment, etc?  
Yes, one-on-one only please, where you know exactly who you are talking to. Please don't demonstrate to any sun employees or lawyers.

3) Assuming either of the above is possible, do we need to make it explicitly clear before talking to developers that Android does not use the JVM and has it's own VM instead?  
The truth is always the best approach.

4) Is the story of "you use Java source code, but libraries and VM differ from Java SE" still the right message to be carried?  
"We use standard development tools such as Eclipse and IntelliJ and developers can use those tools to develop in the Java programming language"

5) Can we put any n approved first?  
No.

On Mar 24, 2008, at

Hi Folks

I will be at JavaOne for the entire week and will be volunteering for several spots of booth duty. As a side effect of this I have some questions regarding Android.

I expect (in fact I am almost certain) that developers will visit the Google booth curious about Android. There are lots of different options if they do so, here are some of the questions I would like considered...

Are we able to answer  
Can we demonstrate

Simply by implementing a class with the same signature of another, in another namespace and simply by looking at available javadocs could be considered copyright infringement, even if the implementation is clean room.

So, we are, in fact, infringing on the spec lead copyright if we distribute something that has not passed the TCK and \*we know that\*.

Unless they sell it.

The bigger question in my mind is not about hardware: what is Oracle's [sic] going to do with 500 million java-powered cell phones? What is Oracle going to do about Android's ripping off some of (now) their IP and getting away with it?

But one thing I want to say out loud: if you come along and lock it down, it doesn't fit the same profile.

This is why I wanted an OSI-like

We forced Sun into OpenJDK as a defensive move against Harmony. If we didn't do Harmony, and OpenJDK didn't happen, all of our (and yours!) java code would feel a lot different.

But while the 'java trap' might not be over about other IP, and we realize that soon enough the hardware

Sun had but was afraid to exercise its nuclear option. What was up in the air? (with Sun and BeOS freaks, who's left that even shows

Java on the desktop is dead.

Java on the phone is dying rapidly: phones (on one side) and moon

Java on the server is alive and well: enterprise legacy. It's the new C++ strong there. Fiercely strong.

The difference is that IBM knows its communities, Oracle does not (something open they acquire is Sleepycat).

Oracle MySQL, Oracle OpenOffice, Oracle NetBeans... scary.

Today is the day our (collective, painful, mostly considered foolish and laughable) investment in Harmony finally pays off.

Hi Andy,

This is a short pre-read for the call at 12:30. In Dan's earlier email we didn't give you a visceral reaction that we got.

What we've actually been asked to do (by Larry and Sergei) is to investigate what technical alternatives exist to Java for Android and Chrome. We've been over a bunch of these, and think they all suck. We negotiate a license for Java under the terms we need.

That said, Alan Eustace said that the threat of moving off Java hit Safra Katz hard. We think there is value in the negotiation to put forward our most credible alternative, the goal being to get better terms and price for Java.

It looks to us that Obj-C provides the most credible alternative in this context, which should not be confused with us
